TRANSFORMING FOOD PACKAGING. **FOR GOOD.**

At Plus Pack, we want to lead the food packaging industry forward – by supporting the transition from linear towards more circular packaging.

Since 1914, our dedication has been fueled by our founding motto: 'The drive to make a difference'. Four generations later, our drive is both stronger and more important than ever before.

We know that food packaging plays a defining role in building a more sustainable tomorrow. By continuously developing and providing truly circular food packaging, we aspire to enable our customers to protect and make food stand out, using ever less of our planet's resources.

For people. For planet. For profit. For good.

CHOOSE
ALUMINIUM.
IT IS
RECYCLABLE.

**FOR
GOOD.**

RECYCLABLE

without loss of quality

TRANSFORMING
FOOD PACKAGING
FOR GOOD

Why use aluminium food packaging?

ALUMINIUM IS A VALUABLE MATERIAL. IT IS RECYCLABLE WITHOUT LOSS OF QUALITY. THE CHAMPION IN A CIRCULAR ECONOMY.

BECAUSE IT IS FIT FOR FUTURE

- Aluminium recycles without loss of quality
- Aluminium food packaging holds on average 35% recycled content. You can find specific numbers in our datasheets.
- By recycling rather than extracting new aluminium, you save 96% CO₂

BECAUSE IT IS FIT FOR PURPOSE

- Aluminium tolerates temperatures from -40°C to 350°C (200°C if lacquered)
- Aluminium ensures equal distribution of heat
- Highest level of food safety due to unique barrier properties
- Optimized logistics due to light weight compared to plastics
- Customize your packaging with colour, print or embossing

BECAUSE IT IS CONVENIENT & FLEXIBLE

- Aluminium goes from freezer or fridge to microwave oven, oven and on the grill

READY2COOK®

Aluminium is the champion in a circular economy. It can be recycled without loss of quality. Ready2Cook® containers can be used as a cooking tray and are perfect for ready-to-cook and ready-to-heat dishes, thereby offering consumers the convenience of ready-meals. The handle design increases convenience. In addition, aluminium is the only material which can go on the grill, making the Ready2Cook® range the ideal choice for BBQ.

FIT FOR FUTURE:

- Mono-material
- Aluminium recycles without loss of quality
- Holds minimum 35% recycled content - find specific numbers for each item in our eCatalogue
- By recycling rather than extracting new aluminium, you save 96% CO₂
- Supports a circular economy - 75% of all aluminium ever produced is still in use

FIT FOR PURPOSE:

- Ready2Cook® range is convenient - can go directly in the oven, microwave oven and on the grill
- Temperature range: -40°C - 350°C (200°C if lacquered)
- Designed with handles for increased convenience
- Heat-sealing possible
- Crystal-clear DPET lids available
- DPET lids have anti-fog feature
- Customize your packaging with colours, prints or embossing

RECYCLABLE

without loss of quality

READY2COOK® (1)

These aluminium containers can be recycled forever. They are recyclable without loss of quality and hold minimum 35% recycled content. They are also convenient as they can be used as cooking trays for ready-meals.

PORTION PACK

Our Portion Pack range is primarily used for food products that need to be preserved over a longer period of time. The containers have a lacquered or polypropylene lining that allows for hot filling, MAP packing, pasteurisation or sterilisation of foods at high temperatures.

STANDARD ALUMINIUM CONTAINERS

Whether you're looking for compartmentalised, rectangular, square, round or specially shaped aluminium containers, you can find a standard solution to your food packaging challenge here. Our standard aluminium containers come in a wide variety of designs and sizes. Many containers can be found with different packing methods. Please check in our eCatalogue or with your sales representative for more information.

STANDARD ALUMINIUM CONTAINERS - FULL CURL (1)

Containers with a full curl rim style come with a horizontal flange and a full curl, which provide stability, and are closed with both foil lids and snap-on reclosure lids.

STANDARD ALUMINIUM CONTAINERS - FOLDED

The smooth side walls and very strong corners make the folded containers the obvious choice for bakers, butchers and delicatessen as products are easy to get out of the containers.

TRANSFORMING
FOOD PACKAGING
FOR GOOD

THERMO BOXES

Keeping your food at the right temperature, these thermal boxes can be used to deliver both warm and cold meals. The Thermo Boxes are made to fit the Gastronorm™ containers and platters.

ABBRAEVIATION:	EXPLANATION:
AF	The lid comes with anti-fog treatment to prevent fogging on the surface
BL	The color of the tray/container is black
BULK	The packaging is packed in bulk
CLBAG	The packaging is packed in clear bags instead of standard blue bags
CL	The packaging is clear/transparent
CMP	The packaging has compartments - either 2, 3, or more
BPA NIA	This means that bisphenol is Not Intentionally Added
DOME	Dome refers to a round high lid
FB	The color of the tray is fiber-color
FULL CURL	The aluminium container is designed with full curl
GN	Indicates that the containers has standard formats called Gastronorm. Either 1/4, 1/2, etc.
GR	The color of the tray/container is grey
GRE	The color of the tray/container is green
H25MM	H indicates the height of the packacging in mm
HANDLES	The packaging has handles
HEART, SHELL, etc.	The packaging has a special shape (e.g. heart-shaped or shell-shaped)
HINGED	The packaging has a hinged lid
INSERT	Refers to a packaging solution that can be used as an insert in another tray/container
LACQ	The aluminium container is lacquered
OVAL	The packaging is oval
PACK or PAC	A packing method - the retail pack has ie 100 units
PERFORATED / PERFOR / PERF	The aluminium packaging is perforated
PREF	The lid is preformed
RECT	The packaging is rectangular
RIDGE	The packaging is ridged in the bottom (works well on the grill)
ROUND	The packaging is round
SET	The item contains a number of sets consisting of an equal number of trays and lids
SMOKEY GR	The color of the tray is smokey grey
SNAP-IN	The lid is a snap-in lid
SQUARE	The packaging is square
VER.CURL	The aluminium container is designed with vertical curl
VENT	The lid comes with venting which enables air to leave the tray
US.PAL	Special pallet size 1200 x 1000 mm
Ø133	Ø indicates the diameter of the lid in mm

GLOSSARY:	EXPLANATION:	SOURCE:
Bio-based products/material	Products fabricated from alternative agriculture materials or forestry materials or both. They are not necessarily compostable or biodegradable.	ASTM D6866 / 2012
Carbon footprint	The overall amount of carbon dioxide (CO ₂) and other greenhouse gas (GHG) emissions (e.g. methane, laughing gas, etc.) [converted into CO ₂ -equivalents] associated with a product, along its life cycle (including supply-chain, use and end-of-life).	European Commission Platform on Life Cycle Thinking
Circular economy	A systems solution framework that tackles global challenges like climate change, biodiversity loss, waste, and pollution. It is based on three principles, driven by design: Eliminate waste and pollution, circulate products and materials (at their highest value) and regenerate nature.	The Ellen Macarthur Foundation
Environmental impact	Any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organization's activities or products.	ISO 14021:2016
Life Cycle Assessment	Process of compilation and evaluation of the inputs, outputs and the potential environmental impacts of a product system throughout its life cycle.	European Commission Platform on Life Cycle Thinking
Mono-material	The packaging is made from a single type of material and should therefore be preferred whenever possible, as it is fully recyclable when sorted correctly.	The Danish Plastics Federation
Net zero CO₂ (also carbon neutrality)	Net zero carbon dioxide (CO ₂) emissions are achieved when anthropogenic CO ₂ emissions are balanced globally by anthropogenic CO ₂ removals over a specified period. Net zero CO ₂ emissions are also referred to as carbon neutrality.	The Intergovernmental Panel on Climate Change
Renewable energy	Energy derived from resources that are not depleted on timescales relevant to the economy, i.e. not geological timescales.	The Ellen Macarthur Foundation
Renewable resource (or material)	A resource that is grown, naturally replenished, or cleansed at a rate which exceeds depletion of the usable supply of that resource. (i.e. cotton, hemp, wood, wool, agricultural by-products, etc.).	ASTM E2129-05 / 2005
Single-use plastic product	A product that is made wholly or partly from plastic and that is not conceived, designed or placed on the market to accomplish, within its life span, multiple trips or rotations by being returned to a producer for refill or re-used for the same purpose for which it was conceived.	Directive (EU) 2019/904
Sustainable development	Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.	Brundtland report, 1987
Virgin material	Materials that have not yet been used in the economy.	The Ellen Macarthur Foundation
Waste	Anything for which the generator or holder has no further use and which is discarded or is released to the environment.	ISO 14021:2016
Waste reduction	Reduction in the quantity (mass) of material entering the waste stream as a result of a change in the goods, process or packaging.	ISO 14021:2016

GLOSSARY:	EXPLANATION:	SOURCE:
Aluminium slag (bottom ash)	The incombustible residual part of the incinerated waste. Slagger or bottom ash is composed of inert, non-combustible materials that are left over after the combustion process: Sand, stones, ash from burnt material.	https://www.cewep.eu/wp-content/uploads/2017/09/FINAL-Bottom-Ash-factsheet.pdf
Biodegradable plastic	A plastic capable of undergoing physical, biological decomposition, such that it ultimately decomposes into carbon dioxide (CO ₂), biomass and water, and is, in accordance with European standards for packaging, recoverable through composting and anaerobic digestion.	Directive (EU) 2019/904
Chemical recycling	Chemical Recycling is defined as any reprocessing technology that directly affects either the formulation of the polymeric waste or the polymer itself and converts them into chemical substances and/or products whether for the original or other purposes, excluding energy recovery.	https://www.chemicalrecyclingeu-rope.eu/copy-of-about-chemical-recycling-1
Closed-loop system	In a closed-loop recycling system, packaging is designed with the goal that all of the material can be recycled into the same type of product after it reaches the end user.	https://www.producebluebook.com/2020/01/03/explaining-closed-loop-vs-open-loop-recycling/#
Compostable	A packaging or packaging component is compostable if it is in compliance with relevant international compostability standards and if its successful post-consumer collection, (sorting), and composting is proven to work in practice and at scale.	NEW PLASTICS ECONOMY GLOBAL COMMITMENT
Downcycling	To recycle (something) in such a way that the resulting product is of a lower value than the original item.	www.merriam-webster.com
Easy-to-recycle	Easy-to-recycle means that a packaging is designed to be recycled. The packaging is made of mono-material and in colors that are detectable by NIR (the most common way of sorting) as well as demanded on the market.	The Danish Plastics Federation
Incineration	Is the high-temperature burning (rapid oxidation) of a waste.	https://www.sciencedirect.com/topics/chemistry/incineration
Landfill	Landfills are delimited constructions where waste can be landfilled under controlled and environmentally sound conditions. Before being landfilled the waste must have been inspected and checked.	https://www2.mst.dk/udgiv/publications/2000/87-7909-605-0/html/kap03_eng.htm
Mechanical recycling	Mechanical recycling refers to operations that aim to recover plastics via mechanical processes (grinding, washing, separating, drying, re-granulating and compounding), thus producing recyclates that can be converted into plastics products, substituting virgin plastics.	https://docs.european-bioplastics.org/publications/bp/EUBP_BP_Mechanical_recycling.pdf
Oxo-degradable plastic	Plastic materials that include additives which, through oxidation, lead to the fragmentation of the plastic material into micro-fragments or to chemical decomposition.	Directive (EU) 2019/904
Post-consumer recycled content	Material generated by households or by commercial, industrial and institutional facilities in their role as end users of the product which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.	(ISO 14021:2016)
Post-industrial recycled content	Material diverted from the waste stream during a manufacturing process.	ISO 14021:2016
Recyclable packaging	A packaging or packaging component is recyclable if its successful post-consumer collection, sorting, and recycling is proven to work in practice and at scale.	New plastics economy global commitment
Recycled content	Proportion, by mass, of recycled material in a product or packaging. Only pre-consumer and post-consumer materials shall be considered as recycled content, consistent with the following usage of terms.	ISO 14021:2016
Recycling	Waste materials are processed into new products or materials.	European Plastics Pact
Reusable	A characteristic of goods or packaging that has been conceived and designed to accomplish within its life cycle a certain number of trips, rotations or uses for the same purpose for which it was conceived.	ISO 14021:2016
Reuse of packaging	Operation by which packaging is refilled or used for the same purpose for which it was conceived, with or without the support of auxiliary products (1) present on the market, enabling the packaging to be refilled.	ISO 18603:2013 Packaging and the environment – Reuse
Recycled aluminium	It is a part of the secondary aluminum process of recycling aluminum scrap into aluminum that can be used again.	https://www.recyclealuminum.org/recycled-secondary-aluminum

MATERIAL	NAME	MONO-MATERIAL	CAN CONTAIN RECYCLED MATERIAL	EASY-TO-RECYCLE	CLEAR	COLORED	FREEZER	MICROWAVE	OVEN	GRILL
